Project Abstract Submission Form

Sec No-	Team No- 33	Project Title- Meter Reading Management & Analytics Portal for Energy & Utilities
---------	-------------	---

1. Abstract

Manual utility tracking often causes billing delays, errors, and low consumer transparency. To solve this, the **Meter Reading Management & Analytics Portal** digitizes the data pipeline for the energy and utilities sector using a full-stack architecture of React.js, Node.js, Express, MySQL, Sequelize, and Chart.js. The platform provides a secure, role-based environment. Consumers use intuitive forms to submit current meter values, replacing fragmented paperwork. Utility administrators leverage centralized data grids with powerful search filters to verify entries and audit consumption logs efficiently.

By integrating Chart.js, the portal automatically translates raw monthly entry logs into interactive consumption graphs. This analytics feature allows consumers to track their personal energy footprints while empowering utility providers with vital trend analysis for resource management. Ultimately, the system eliminates traditional data entry errors, simplifies data reporting, and promotes efficient resource consumption.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520090223	Gatik Sharma	
2520090118	Vikram Immella	

3. Frameworks / Platforms / Software Used

(List the frameworks, libraries, platforms, or tools you plan to use.)

Analytics Portal for Energy & Utilities :- React.js, Node.js, Express, MySQL, Sequelize, JWT, Chart.js
